TOP500 analysis and MACC
(some images are borrowed)

Discussion of homework requested in previous session

1. Go to the TOP500 website and analyse & comment:
 - i. The country distribution over the past 25 years, in #systems and aggregate performance in the TOP500 list
 - ii. The evolution of the key PU chip technologies and the accelerator families in the past 25 years
 - iii. The overall impact of each processor technology and accelerator family in the past 3 years

2. EuroHPC is funding 8 supercomputing centres selected in June 2019: 3 pre-exascale & 5 petascale
 - i. Find & identify these 8 supercomputing centres
 - ii. Characterize the architecture of Deucalion in MACC

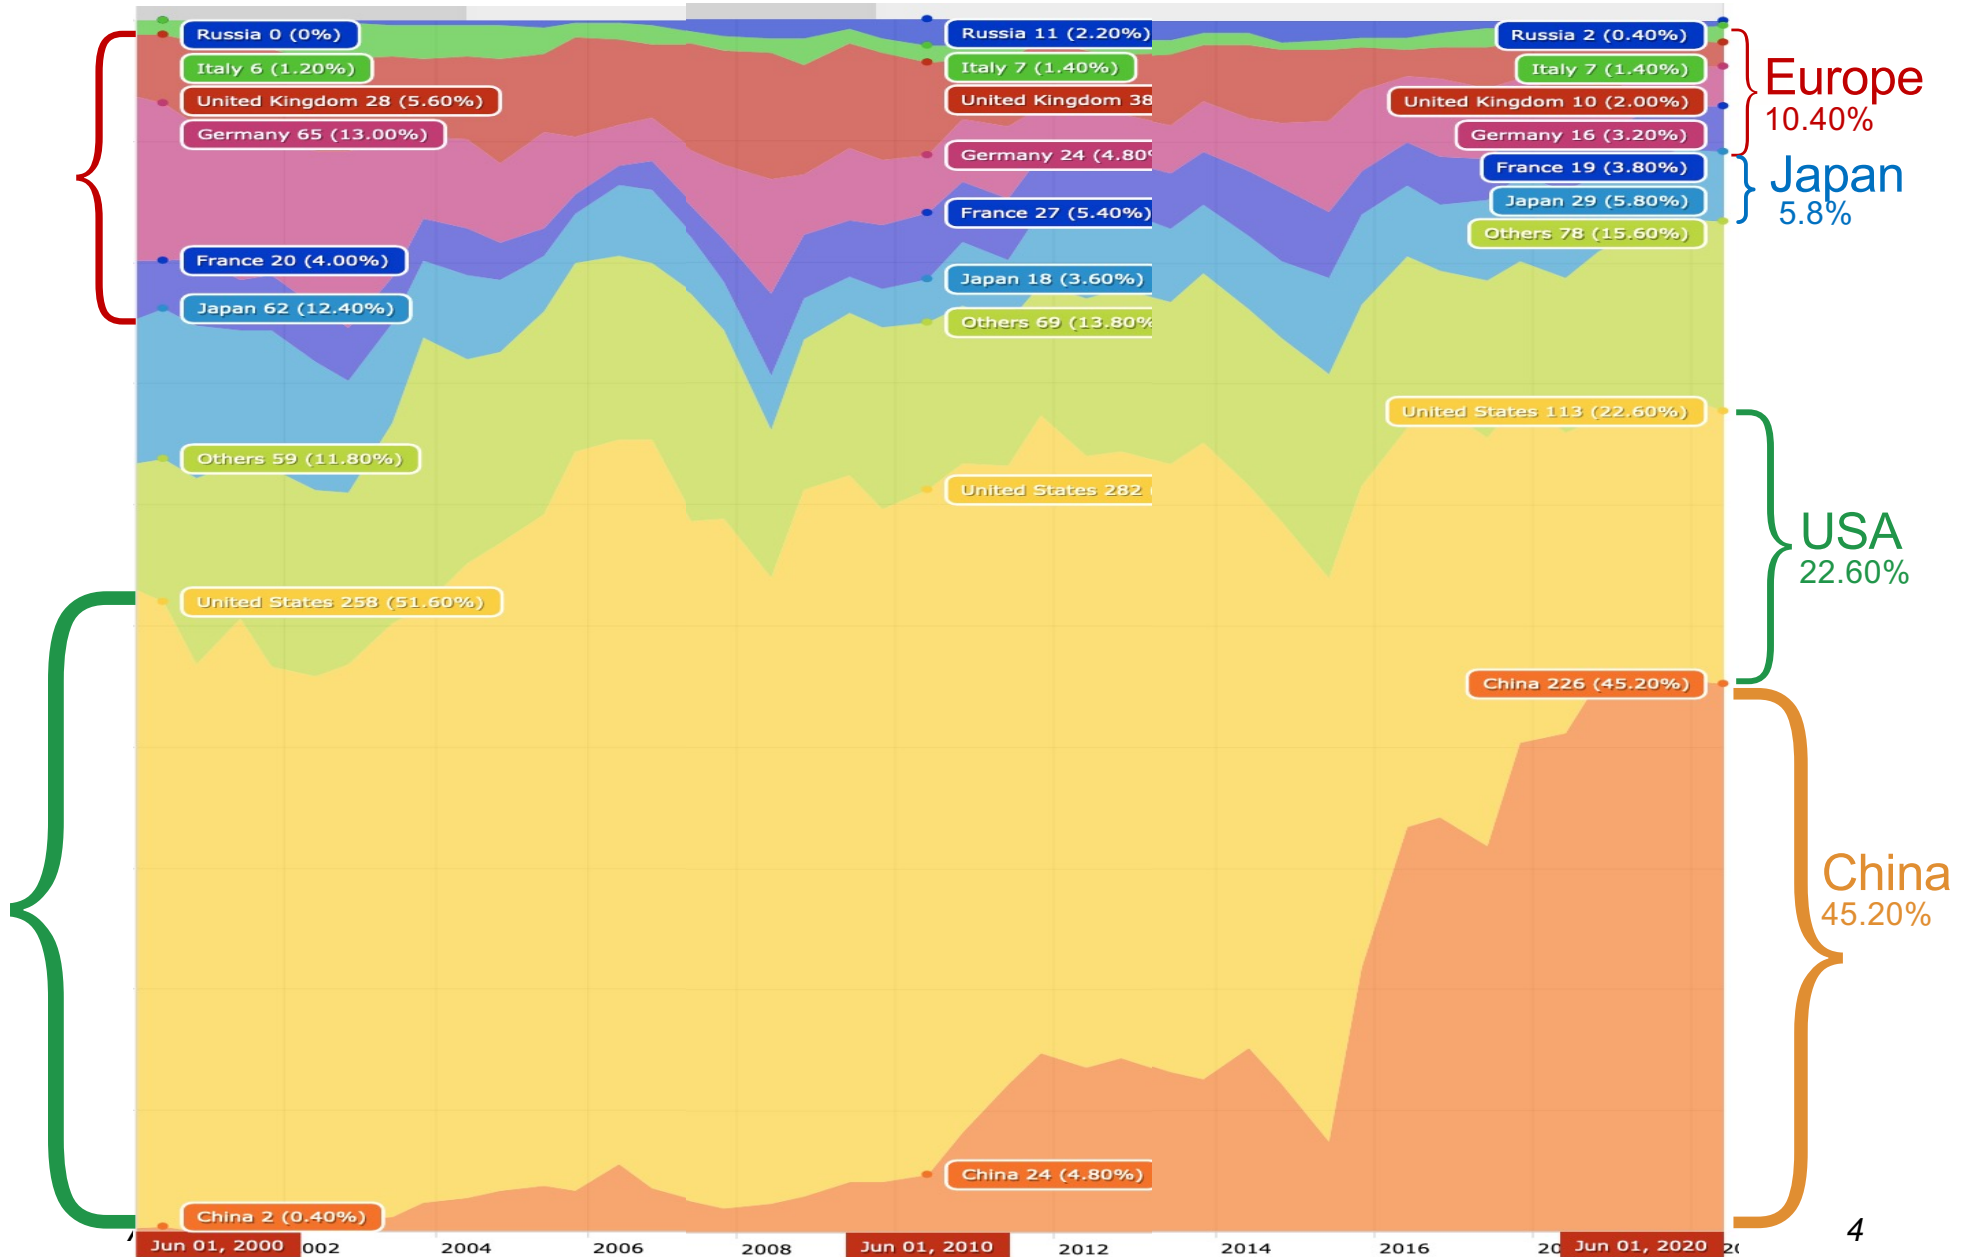

The Chinese already overcame this barrier w/ 2 systems:

Sunway OceanLight e Tianhe-3

Country distribution over the past 20 years: # systems

Country distribution in Nov'21: # systems

Top500 supercomputers, share by countries

Source: DG Research & Innovation based on <https://www.top500.org/>

Country distribution over the past 8 years: aggregate performance

Country distribution in Nov'21: #systems & performance

PU chip technology 1993 to 2020

Top processor families 1993 to 2019

Processor Generation Performance Share

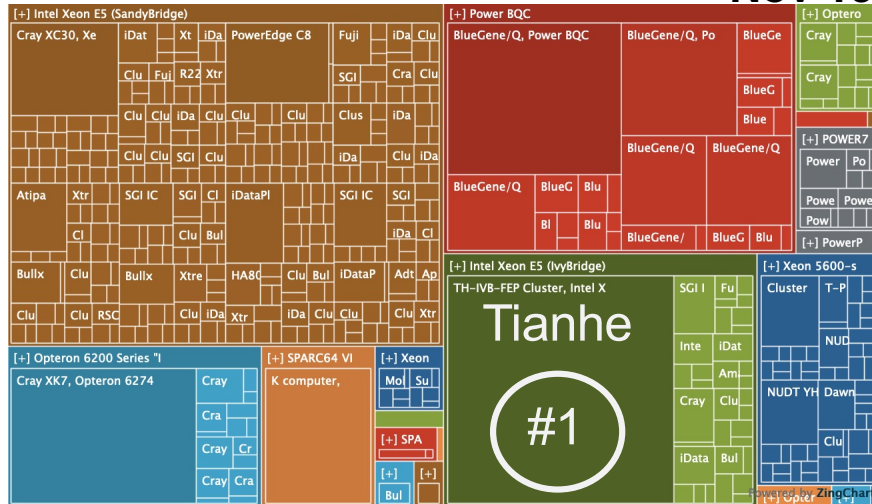

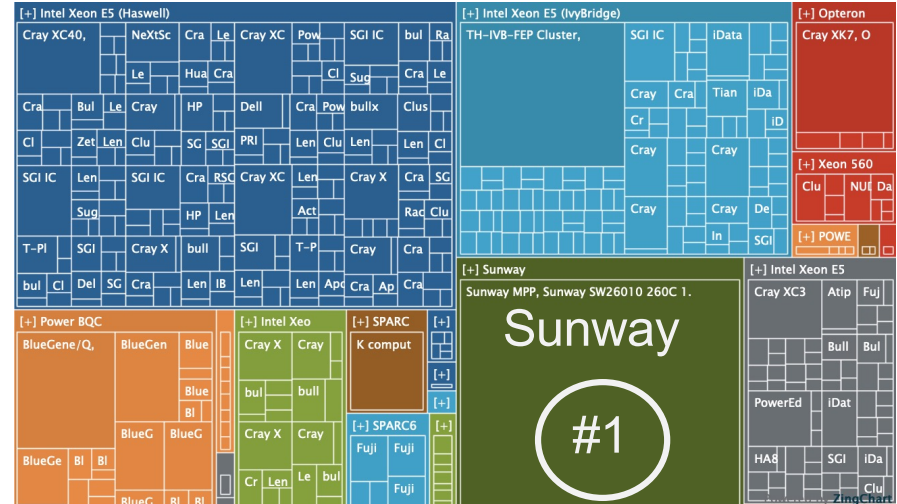

Architecture family of key #1's: Nov'13 to Nov'21

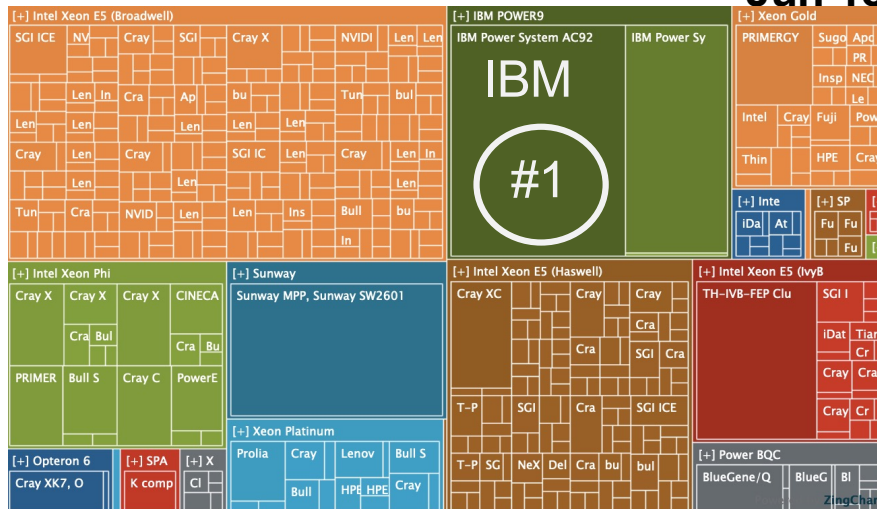

Nov'13

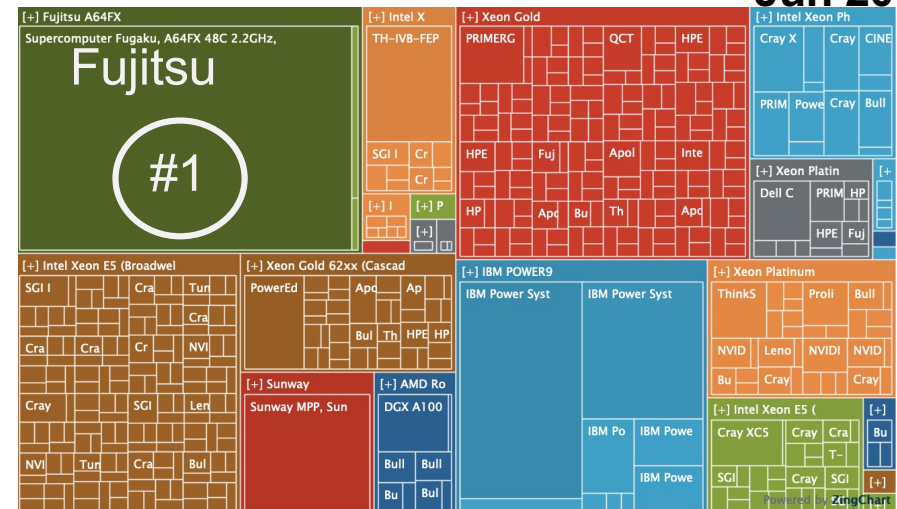

Jun'16

Jun'18

Jun'20

Accelerator families 2006 to 2020

Accelerators: #systems Jun'10-Nov'21

Accelerator/CP Family System Share

Accelerator/CP Family Performance Share

- NVIDIA Volta
- NVIDIA Ampere
- NVIDIA Pascal
- NVIDIA Kepler
- Intel Xeon Phi
- Matrix-2000
- Others
- Other

Accelerator families evolution 2012 - 2021

Note: the role of Ampere

AJProença,

Suggestion of homework for discussion in this session

1. Go to the TOP500 website and analyse & comment:
 - i. The country distribution over the past 25 years, in #systems and aggregate performance in the TOP500 list
 - ii. The evolution of the key PU chip technologies and the accelerator families in the past 25 years
 - iii. The overall impact of each processor technology and accelerator family in the past 3 years

2. EuroHPC is funding 8 supercomputing centres selected in June 2019: 3 pre-exascale & 5 petascale
 - i. Find & identify these 8 supercomputing centres
 - ii. Characterize the architecture of Deucalion in MACC

PARTNERSHIP FOR ADVANCED
COMPUTING IN EUROPE

PRACE: Best Practice Guides

PRACE Best Practice Guides

PRACE Application Enabling and Support' activities provides applications enabling and technical services for HPC applications codes that are important for European academic and/or industrial researchers to ensure that these applications can effectively exploit current and future HPC systems.

Beyond directly working on improving applications and libraries, one of the main objectives of the Work Package is to support European HPC research communities through the provision of Best Practice Guides, benchmarks, and technical results in [White Papers](#).

The successful series of Best Practice Guides was initiated in PRACE-1IP and has been continuously extended since then. Topics for these Best Practice Guides include:

- A short description of the processor architecture
- Optimal porting of applications (e.g. choice of numerical libraries and compiler options)
- Architecture specific optimisation and scaling techniques
- Optimal system environment (e.g. tuneable system parameters, job placement and optimised system libraries)
- Debugging tools
- Performance analysis tools
- Programming environments

AJProença, Details of European Workshops On HPC Infrastructures can be found [here](#).

EuroHPC Leading the way in European Supercomputing

The European High Performance Computing Joint Undertaking (EuroHPC JU) is a joint initiative between the EU, European countries and private partners to develop a World Class Supercomputing Ecosystem in Europe.

<https://eurohpc-ju.europa.eu/>

EuroHPC selected 8 supercomputer centres for funding

- **3 pre-exascale** supercomputers: current #2 in TOP500
 - **MareNostrum 5** (BSC, Spain): >205 peak PFLOPS
 - **Leonardo** (CINECA, Italy): **322.6** peak PFLOPS
 - **LUMI** (CSC, Finland): **552** peak PFLOPS
- **5 petascale** supercomputers:
 - **MeluXina** (LuxConnect, Luxembourg): **15+** peak PFLOPS
 - **Karolina** (IT4 Innov. Nat. Supercomp. Centre, Czech Rep.): current #58 in TOP500 **15.7** peak PFLOPS
 - **Deucalion** (MACC, Portugal): 10 peak PFLOPS
 - **Vega** (IZUM, Slovenia): **10.1** peak PFLOPS
 - **Discoverer** (Sofiatech, Bulgaria): **6** peak PFLOPS
