FÍSICA EXPERIMENTAL DE PARTÍCULAS

PROJECT

COMPUTATIONAL PARTICLE PHYSICS

2015/2016

INTEGRATED PROJECT

ADVISOR

ANDRÉ PEREIRA

Agenda

- * Background
- * Standard Model
- * Particle Collisions and Analysis
- * Integrated Project Proposals

BACKGROUND

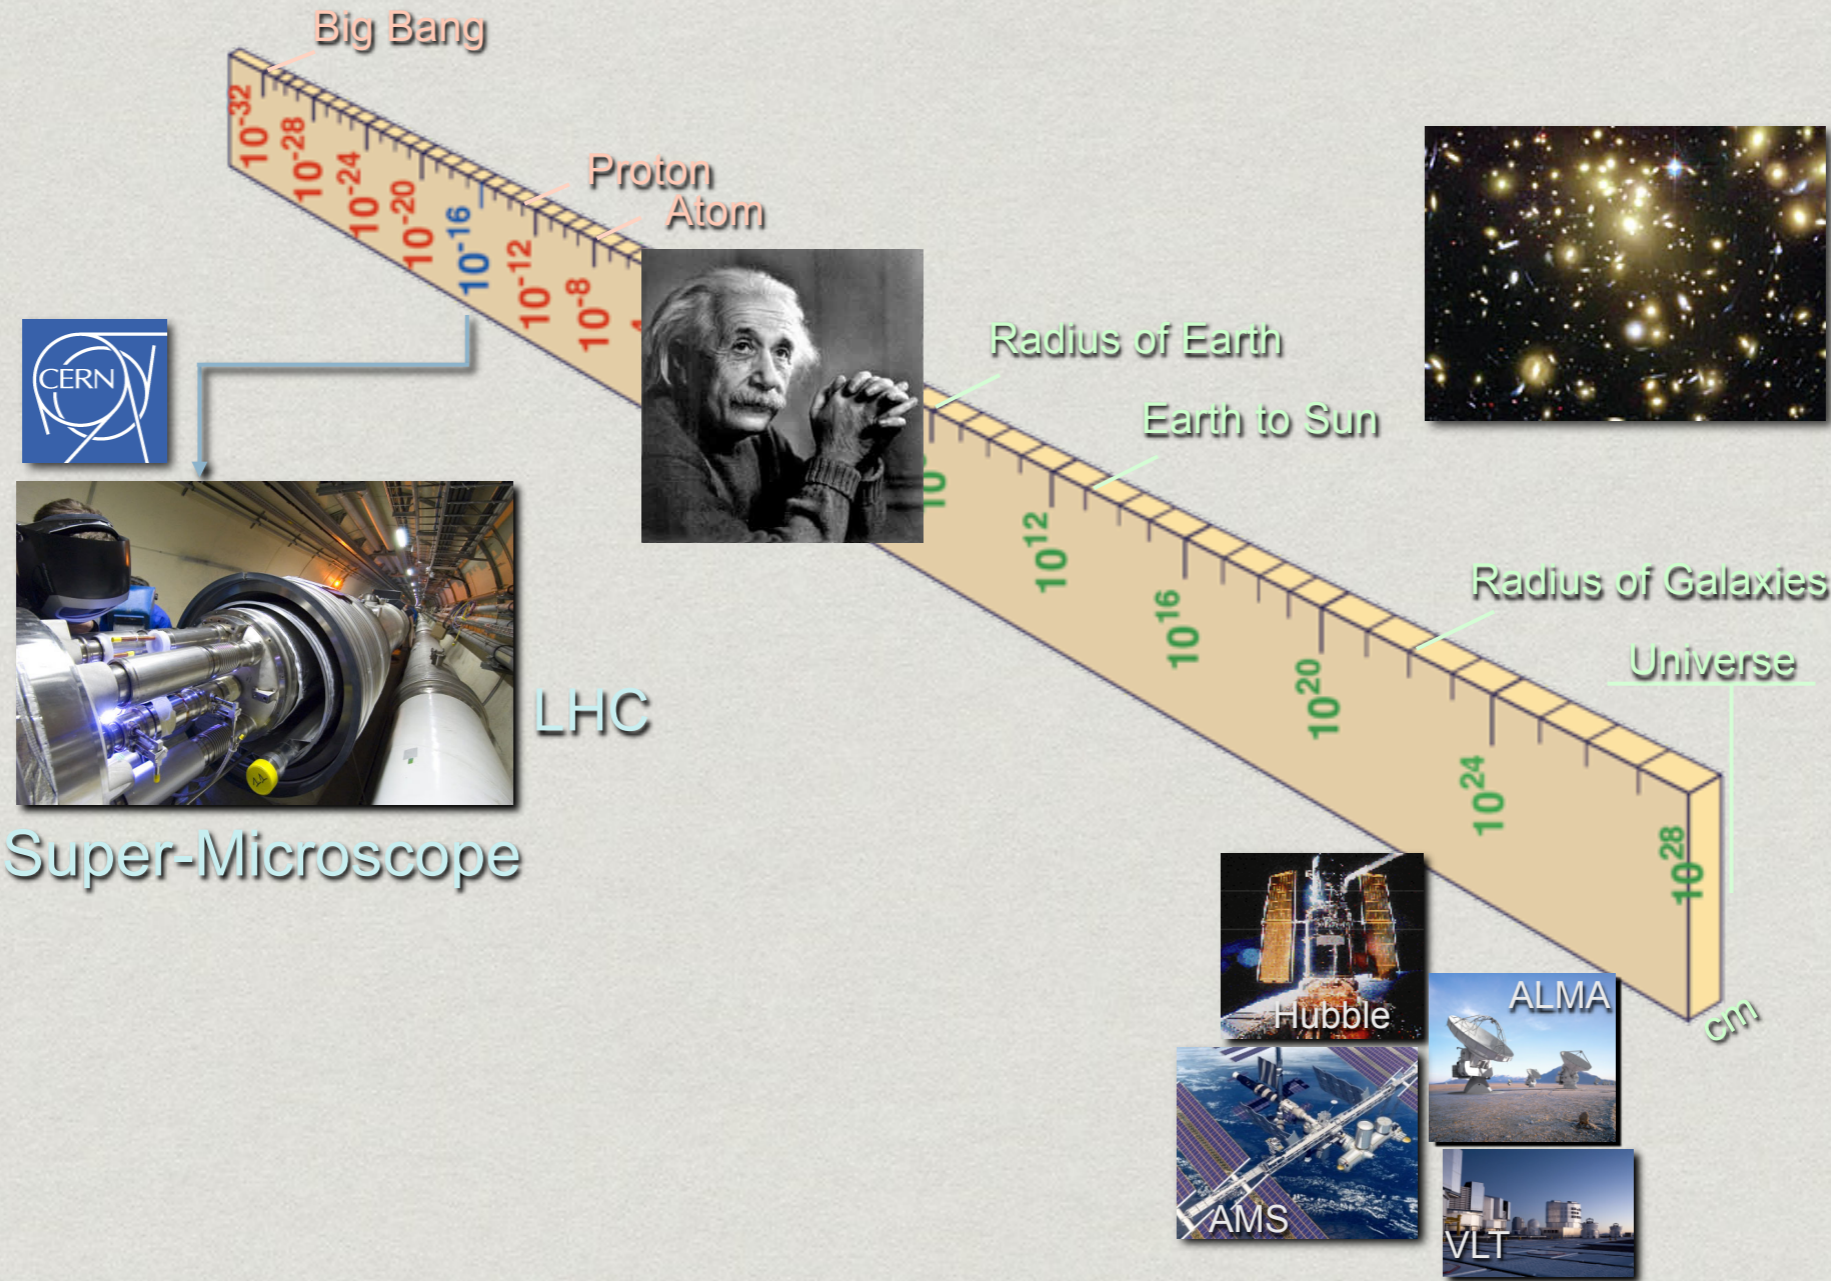

CERN

- * European Organisation for Nuclear Research
- * Formed in 1954
- * 21 member states and 7 observers
- * Human resources at the end of 2013
 - * 2513 staff members
 - * 12313 fellows, associates, and engineers
 - * 608 universities and research centres
 - * 113 nationalities

CERN

CERN

- * Research focus on High Energy Physics
 - * Interactions at the quantum level
- * Some scientific contributions
 - * 1973 - discovery of neutral currents
 - * 1983 - discovery of W and Z bosons
 - * 1989 - number of light neutrino families determination
 - * 1995 - first creation of antihydrogen atom
 - * 1999 - discovery of direct CP violation
 - * 2012 - discovery of the Higgs boson

Particle Accelerator

Large Hadron Collider

- * 27 km perimeter, 100m underground
- * Energy of 7 TeV
- * 4 major experiments
 - * different approaches to solve similar problems
- * Operating temperature of -271°C
- * A 3k million € facility

ATLAS Particle Detector

Atlas Particle Detector

- * 25m diameter per 45m length
- * 800 million collisions/sec
 - * only 200/sec are interesting
- * 3.2 petabytes of data per year

THE STANDARD MODEL

$$\begin{aligned}
& -\frac{1}{2}\partial_\nu g_\mu^a \partial_\nu g_\mu^a - g_s f^{abc} \partial_\mu g_\nu^a g_\mu^b g_\nu^c - \frac{1}{4}g_s^2 f^{abc} f^{ade} g_\nu^b g_\nu^c g_\mu^d g_\nu^e + \\

The Standard Model (SM)

- * Theory that explains the fundamental particles and forces
 - * Proposed in the mid 70's
 - * Has several limitations
- * Often regarded as the “theory of almost everything”
 - * It explains almost 5% of the universe!

Fundamental Particles

- * Particles divided according to specific properties
- * Fermions
 - * Quarks
 - * Leptons
- * Gauge bosons
- * Higgs Boson

Fundamental Particles

- * Fermions
 - * Have antiparticles
 - * Matter particles
 - * Grouped by Pauli exclusion principle
 - * Instability increases from left to right
 - * Higher probability of decaying
 - * Quarks hadronize

Fundamental Forces

- * Gauge bosons
 - * Mediate interactions among the fundamental particles
 - * Each one is responsible for a single force
 - * Particles exchange gauge bosons to interact

Fundamental Forces*

- * Gluon
 - * Strong interactions among coloured particles
- * Photon
 - * Electromagnetic force interactions among charged fermions
- * W and Z bosons
 - * Weak force interactions among fermions
- * Electroweak interactions mediated by a combination of W, Z, and photons

* where is gravity?

The Higgs Boson

- * Higgs mechanism proposed in 1964
 - * A field that is present everywhere
 - * Breaks the symmetry of gauge bosons fields
 - * Gives mass to the fundamental particles!
 - * Excitations of the field originate Higgs bosons
 - * Very unstable (lifetime of 10^{-22} seconds)

Higgs Boson Production

Higgs Boson Decay

SM Challenges

- * Where is gravity?
 - * Attempts of adding a graviton do not fit with what is measured experimentally
- * Dark matter (28% of the universe energy) is not modelled by the SM
- * SM predicts that neutrinos should be massless
- * The universe has more matter than antimatter
- * ...

PARTICLE COLLISIONS AND ANALYSIS

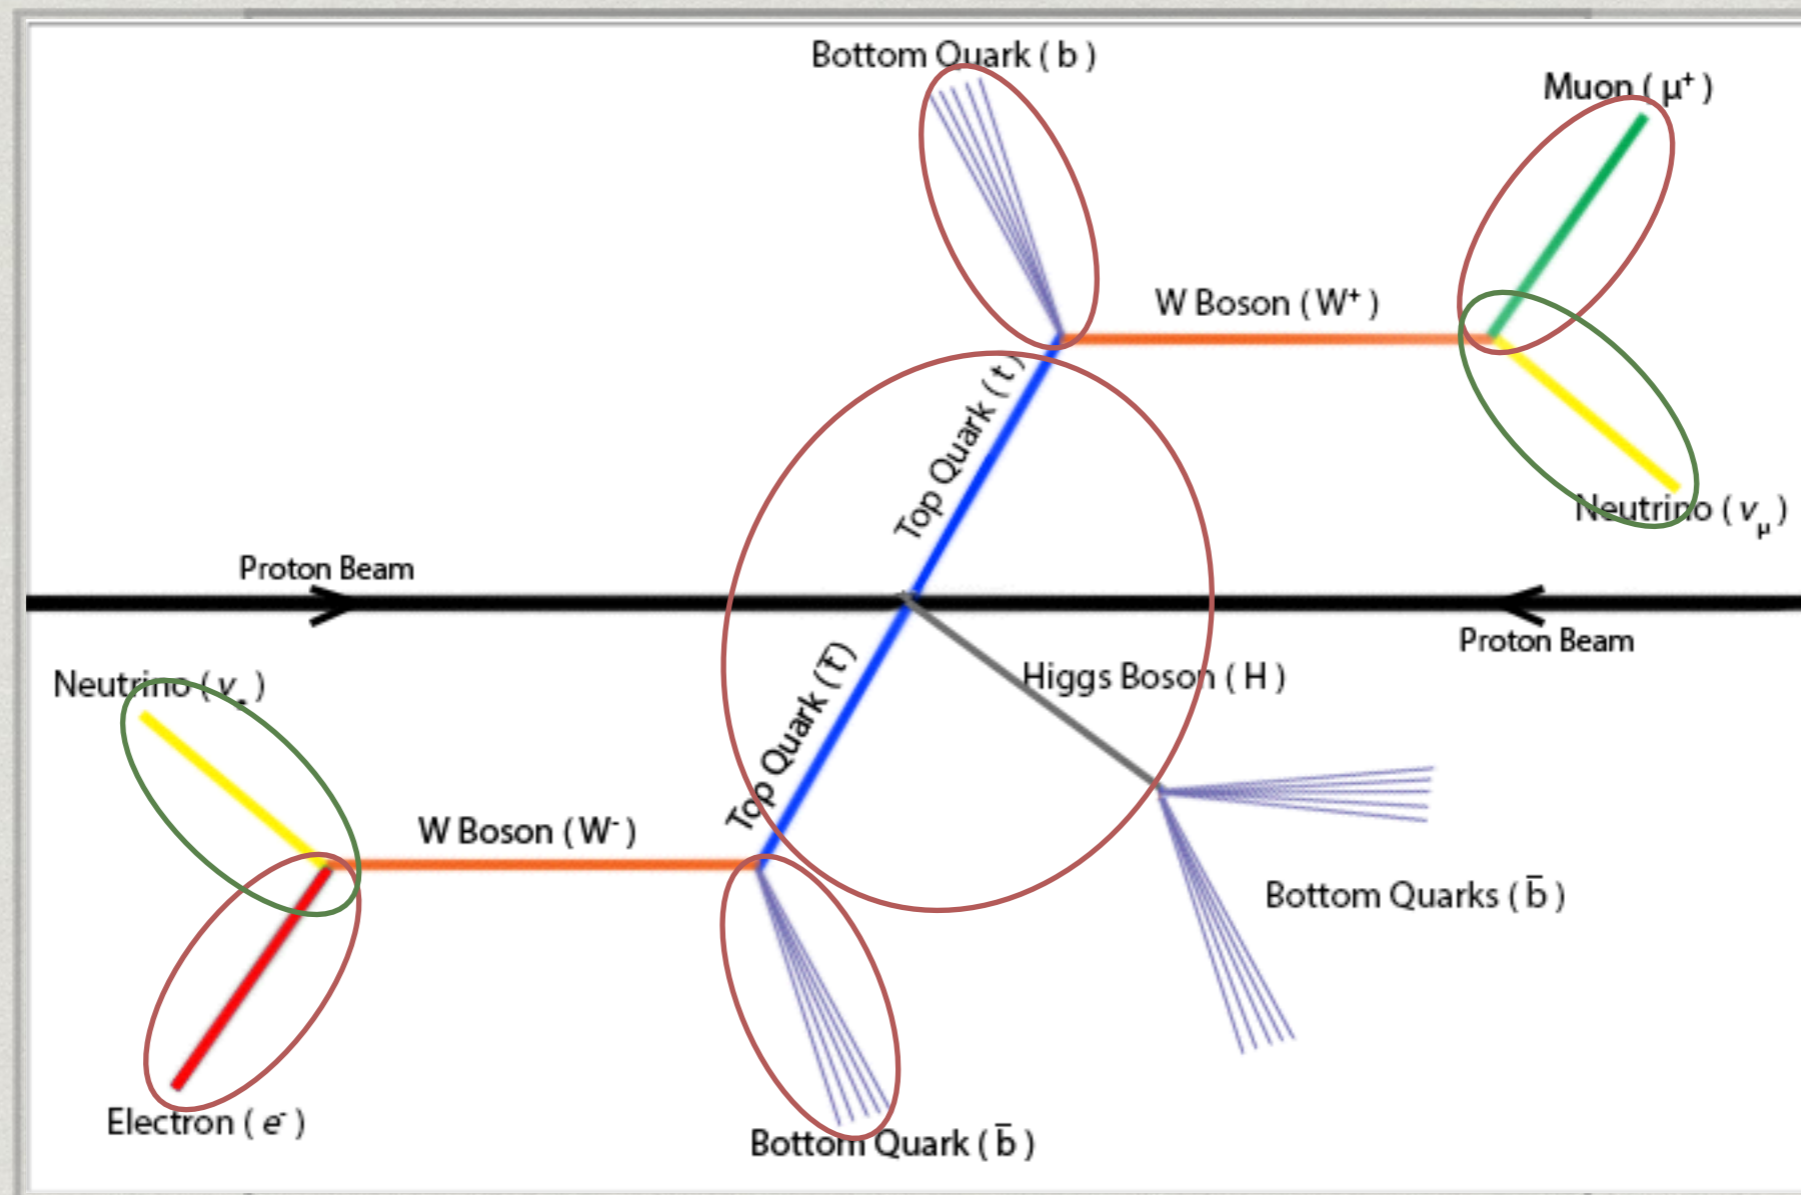

The Collision

- * Bunch of particles accelerated by the LHC close to the speed of light in opposite directions
- * Set to collide at a specific detector core
- * Technically, in high energies, particles do not collide...
 - * The particles mediating the fundamental forces interact

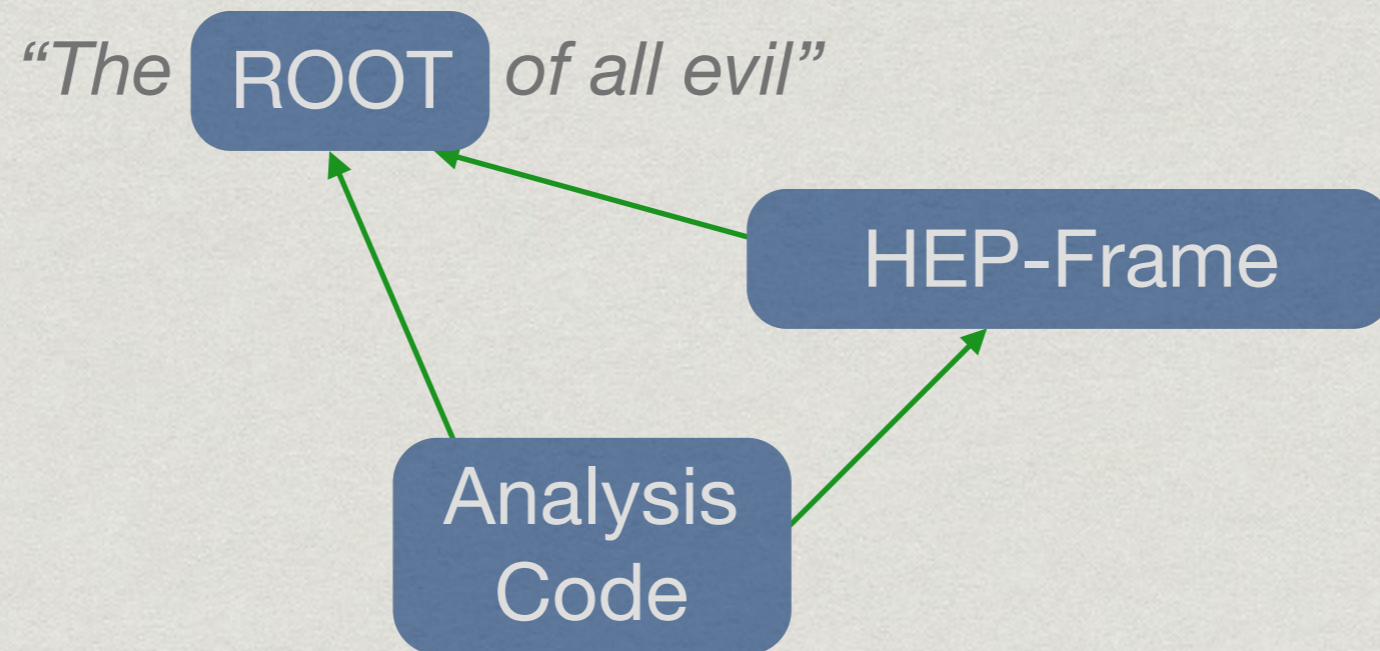

Inside the ATLAS Detector

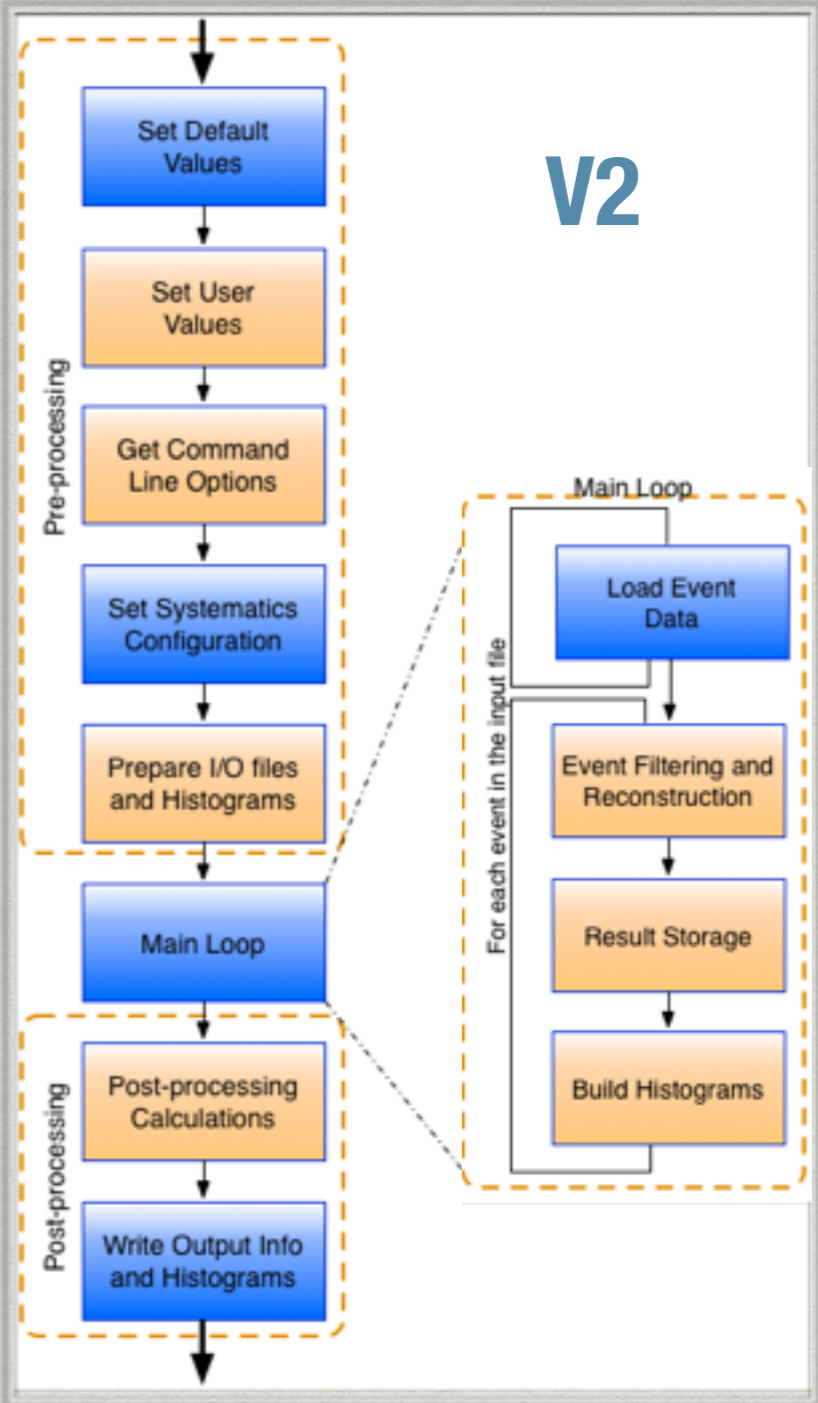

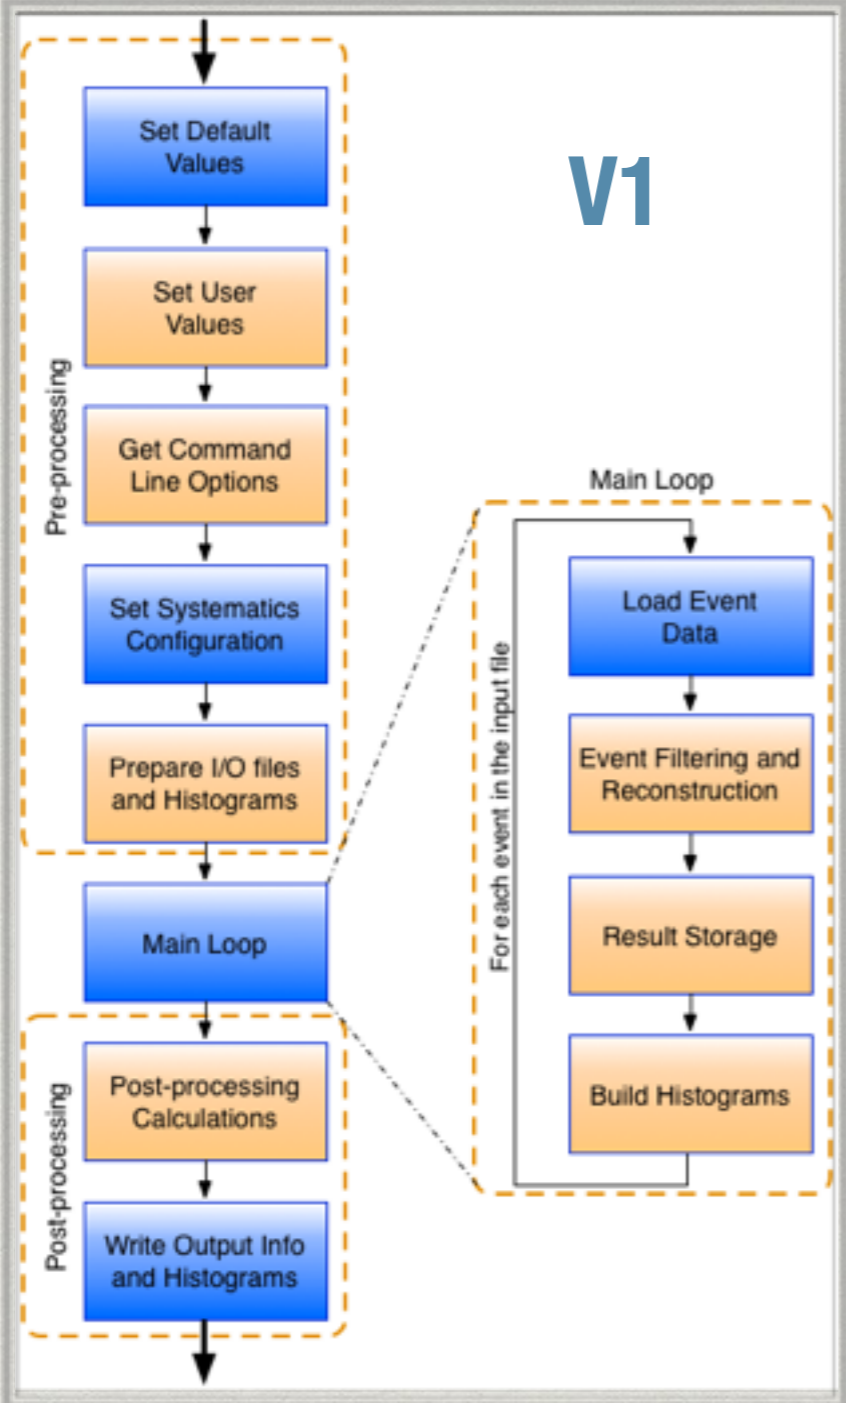

Higgs Boson Couplings to Top Quarks

Code Dependencies

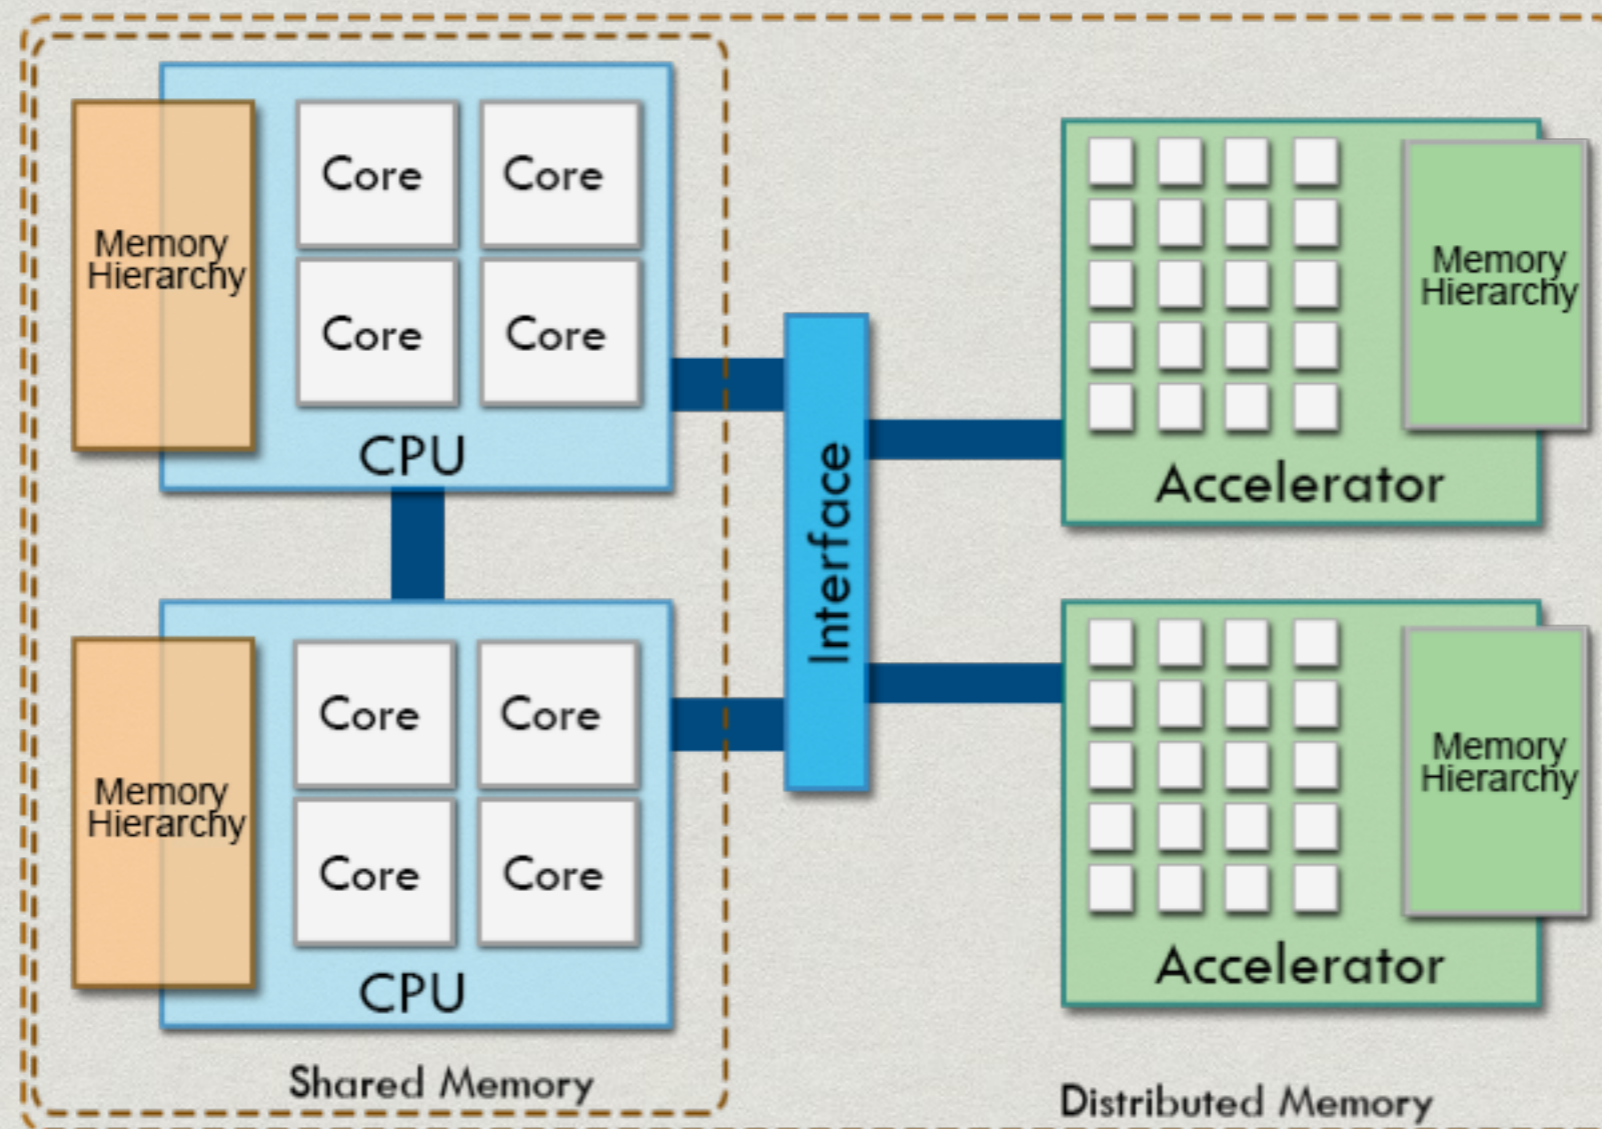

Code Structure

Challenges (i)

- * The latest version of HEP-Frame has inefficiencies... Where?
 - * File I/O
 - * Parallelisation mechanisms
 - * Underuse of available resources (such as memory)
- * Profile, identify bottlenecks, improve the code
 - * And perhaps propose alternatives?

Heterogeneous Platforms (HetPlats)

HetPlats Challenges

- * Different architectures
 - * Distinct designs of parallelism
 - * Distinct memory hierarchies
- * Different programming paradigms
 - * Distinct code for efficient algorithms among devices
- * Workload management
 - * High latency communication between CPU and device
 - * Different throughputs among devices

HetPlats Frameworks

- * StarPU
 - * Task based
 - * Minimisation of memory transfer costs
- * Legion
 - * Dynamic partitioning of the workload
 - * Relies on properties added to the data structures
- * DICE
 - * Dynamic partitioning of the workload
 - * Specific data structures provided
 - * In-house development

Challenges (ii)

- * Porting HEP-Frame with these frameworks to
 - * Improve the code efficiency in
 - * Multiple multicore CPUs
 - * Multiple multicore CPUs + NVidia GPUs
 - * Multiple multicore CPUs + Intel Xeon Phi?
 - * Port the efficiency across different architectures

Resources

- * The code (duh)
- * A PhD pre-thesis
- * A MSc thesis
- * One publication
- * Me!
